GLASS RAILINGS

Glass railings have an elegant, modern look that adds value to your property. Our enclosures provide an excellent wind barrier without obstructing views. Suitable for both interior and exterior spaces, our glass railing systems add a unique touch to any dwelling.

ClearView Glass Railings feature 1/2" tempered glass with safety edge.

ClearView Glass Railings Pros

Unlike hardwoods, glass railings don't need repeated painting or finishing for enhancing their durability. This is a vital consideration since decks/patios are continuously exposed to external, weather conditions. ClearView Glass Railings use large panels of glass fixed with 316 stainless steel solid core spigots. Neither glass nor the 316 stainless steel solid core spigots corrode when exposed to water. The outer surface of glass panels is better suited to tolerate temperature extremes. As a result, unlike hardwood railings, glass railings are not vulnerable to surface cracking. ClearView Glass Railings are made from 1/2" tempered glass panels. This is a specially manufactured type of glass, offering amazing durability. Unlike ordinary glass, tempered glass does not shatter even if it is cracked. This makes glass railings as sturdy and safe as wood or purely metal-based railings. The use of transparent glass ensures that visibility through the deck is maintained. Blocking of the external view is a major issue with metal/wood railings.

We just built a beautiful new home on the St Croix River with ClearView Glass Railings on all of our decks. When friends come to visit they walk right out to the deck and go "Wow! There is no disruption of your over view!" The ClearView Glass Railings are many times the highlight of the home.

High Visual Appeal

ClearView Glass Railings offer a clean, contemporary look to trump any deck railing system. For many, ClearView Glass Railings constitute the design gold standard and provide the most visual appeal.

Unobstructed Views

If your deck, patio, or veranda looks out onto a view, ClearView Glass Railings are an excellent way to ensure that view is preserved or otherwise unobstructed. ClearView Glass Railings are entirely transparent. You and your guests will have a great vantage point from your deck!

Design Versatility

Because glass appears neat and finished, it is one of the only porch railing systems that can incorporate multiple design elements without looking cluttered or hodgepodge. This gives you more versatility and options when it comes to the actual design of your outdoor space.

Solid Wall Structure for the Perimeter of Your Deck

Unlike other handrails for decks, glass creates a solid barrier between the 316 stainless steel spigots and the ground below. Therefore, if you have an elevated deck or screened porch, glass decking product by ClearView Glass Railings will eliminate the inconvenience of losing your view while providing safe barrier.

316 Stainless Steel Solid Core Spigots with base cover (right).

Durability

Most glass railings are made from one-quarter inch thick tempered glass. ClearView Glass Railings are made with 1/2" thick tempered glass with safety edge (shown above, left) and have been tested to a strength of withstanding 13,800 pounds of impact per square inch!

Value

Clear View Glass Railings (tempered glass)				
Panel Width	Panel Height	Thickness	Solid Core Spigots	Cost (Single Panel + Two Spigots)
5' Wide	39.37"	1/2"	2 x 316 Higher Quality*	\$440
Competition (tempered glass)				
Panel Width	Panel Height	Thickness	Hollow Core Spigots	Cost (Single Panel + Two Spigots)
5' Wide	36"	1/4" or 3/8"	2 x 304 Standard*	\$520 - \$640

*See note on quality at bottom of page

Awesome! That sums it up! ClearView Glass Railings are simply awesome! 100% view from our deck with nothing to block our view. Clean, crisp, maintenance free. Absolutely love them!

Easy Installation

Installing ClearView Glass Railings may require a rail frame be built to fasten the spigots to. Take precise measurements to ensure your order is accurate.

Each ClearView Glass Railings 1/2" thick tempered glass panel with safety edges is 5' wide by 39.37" tall. ClearView Glass Railings solid core spigots are placed 35" apart, centered on the glass panel. There should be a 3" space between glass panels.

Thus each ClearView Glass Railings glass panel section plus 3" space equals 63" total length.

Love....Love....Love these. It makes my view of the river so much better, Clear View Glass Railings are just incredible!

Easy Maintenance

"You have to clean glass all the time." I hear this a lot and it drives me a little nuts. Glass isn't the annoying pain in the neck that some people make it out to be. Glass railings require very little maintenance, typical cleaning intervals is every 2 or 3 years.

Cleaning glass deck railings can be as simple as wiping the glass down with a squeegee or spraying it with a hose. Another great aspect of ClearView Glass Railings is that almost everything—including those marker scribbles from your two-year-old—can be cleaned off glass without damaging the surface.

***Clear View Glass Railings 316 stainless steel solid core spigots are suitable for salt water installations. Less expensive 304 stainless steel spigots will corrode in salt water environment as well as areas with air pollution and rain pollution.**
